Dear Senator Blackburn,

I was pleased to read the text of the press conference on June 11, 2021, at which you and four other Senators announced that you would fully investigate the events surrounding the Corona pandemic.

Unfortunately, in this day and age, you don't know who to trust. Nevertheless, you have to start with trust.

Although you may already know all this, I would like to point out that there is much more at stake than just covering up a virus outbreak in Wuhan. As the operator of the website https://stopreset.ch (in German, with English entry), I have been dealing with the topic of Corona since February 2020 - the website was launched at the end of 2020.

Two people who have come close to the truth:

Dr. Mike Yeadon: Why are we being lied to about Covid? There's no good reason

Archbishop Carlo Maria Vigano: The big reset: The last big lie

Also with the death figures, is and was manipulated world-wide.

US star statistics for the last 11 years

Year	Deaths	Population
2010	2,468,435	309,346,863
2011	2,515,458	311,718,857
2012	2,543,279	314,102,623
2013	2,596,993	316,427,395
2014	2,626,418	318,907,401
2015	2,712,630	321,418,820
2016	2,744,248	323,071,342
2017	2,813,503	325,147,121
2018	2,839,205	327,167,439
2019	2,854,838	329,110,439
2020	2,916,492	332,103,290

Why 400,000 people did not die from Covid-19 in the U.S.

We see above that the number of deaths appears to be increasing by about 1% each year - predictable as the population is also increasing. So if there had been no coronavirus, we would have expected a total death toll of about 2,883,386, but the actual number for 2020 was 2,916,492, or an increase from the norm of 33,106, not 400,000. Based on a total population of 330,849,169, this means: **If every one of these additional deaths were due to Covid-19, it would mean a mortality rate of 0.01%**. Source

Same with intensive care bed occupancies, etc.

Thank you again for your commitment to freedom and democracy.

All the best, good luck and kind regards

Daniel Tenner
P.S. do not get vaccinated
